Creative Formulation Concepts, otherwise known, as CFC Tech Services, Inc. is a Minnesota based company that creates, manages and customizes management software. The products are specialized to optimize the formulation related needs of animal feeds, pet foods, human foods, fertilizers, and other blended products. Software engineers take the mathematical and formulation concepts to create formulation programs for maintaining blended products. CFC has been around for over 30 years and is proud of their affiliation with the Animal Agriculture and Food Science Industries.

This project is to upgrade and transition the Concept 5 product in Visual Basic 6 from the current Tsunami data storage software to SQL Servers application.

The owners of CFC Tech Services, Inc. are Mark Weber and Andy Watland. Working with me on this transition is Mark Weber, The Project Manager/Owner. Other team members is Michael Weber and Carol Marston who will work on this and other projects for different products.

The purpose of the project maintain the integrity of the existing VB6 code that works with the current storage application and to do Q&A on new code that has been written to work with the upgrade SQL server system. During the testing process, I am creating testing data in SQL tables and working through each line of code throughout the application to ensure that the functionality remains intact with the new server system.

The approximate time-frame for the intern portion of the project is from the end of June, 2018 through December, 2018. The current working schedule is Monday – Wednesday for 7 hours each day totaling around 500 hours.

CFC Tech Services, Inc. has two locations. The business location is in Pirez, MN while the database support location is in North Mankato, MN.
